

# **Monic's Portfolio**

## **Acknowledgement**

I would like to thank my computer teacher Mr. Khem Raj Poudel who gave me an opportunity to display my project. I would also like to thank my friend Mr. Bimal Bhandari who is a professional in this area and helped teach me html and css language when I didn't had any clear knowledge of them.

I would also like to express my thanks to websites like w3schools, google, chatgtp , quora and reddit which helped me to correct my mistakes while I was writing codes for this website.

# **About My Website (Introduction)**

This is my portfolio website which was developed by me. I have used HTML (Hypertext Markup Language) and CSS (Cascading Style Sheets) languages to develop this website. The name of this portfolio is Monic's portfolio.

My portfolio is a collection of my work, showcasing the skills and knowledge I have acquired over the years. It is an opportunity to demonstrate my creativity, innovation, and problem-solving abilities. From web design to photography, my portfolio is an expression of my journey as an artist and a professional.

At first you are greeted with a sign "Welcome To My Website" with a slide in animation on the "Home" section. Then you can scroll down and see an "About Me" section following with "My works" section and "Contact" section.

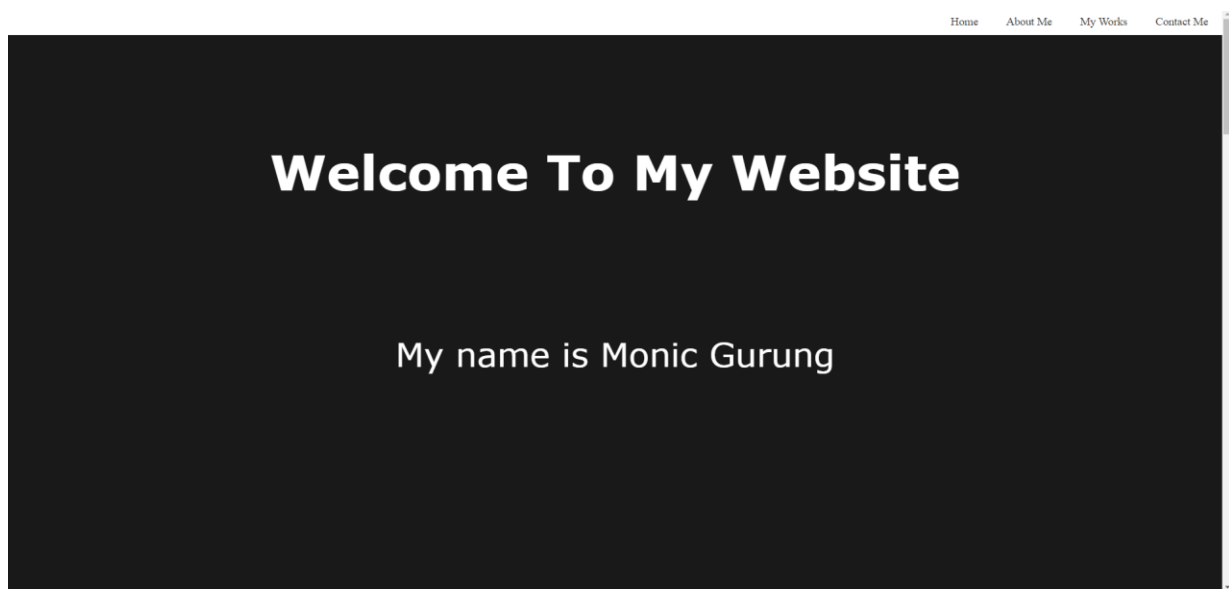

The "About Me" section contains information about me. The "My Works" contains the photographs that I personally took. Then at last the "Contact" section contains an area through which one can message me. It also contains my facebook and instagram profile page link and link to my discord server.

One can also go to these different sections without scrolling and by clicking on the buttons on the top right side.

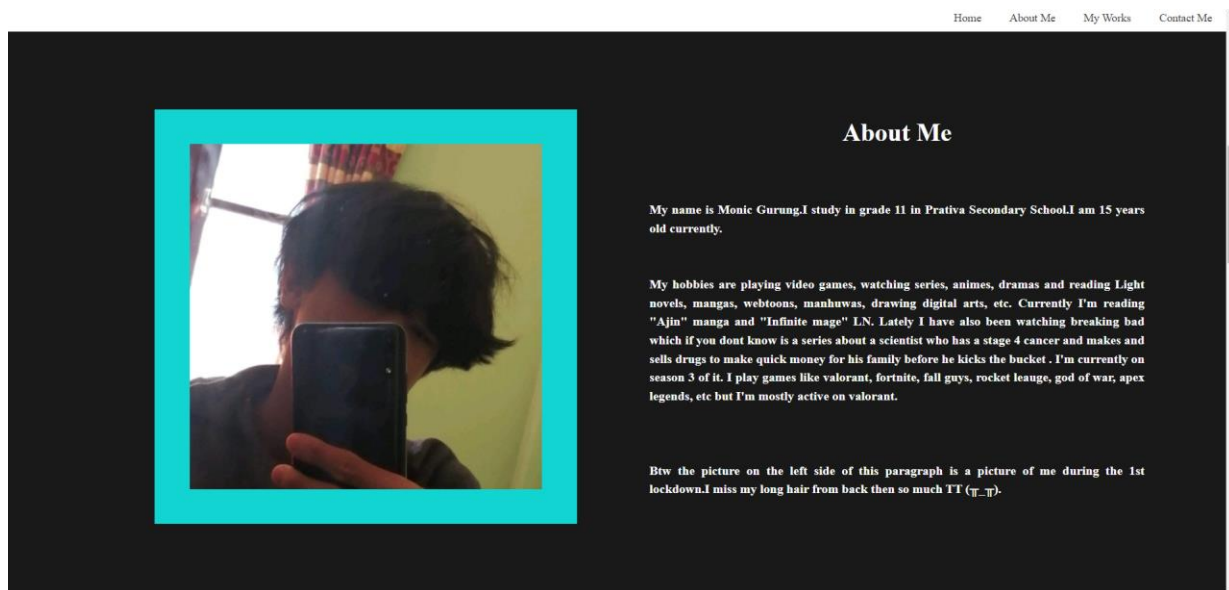

# Analysis

The user interface is simple and user friendly. All the buttons are fully responsive. This website was fully made using HTML (Hypertext Markup Language) and CSS (Cascading Style Sheets) languages.

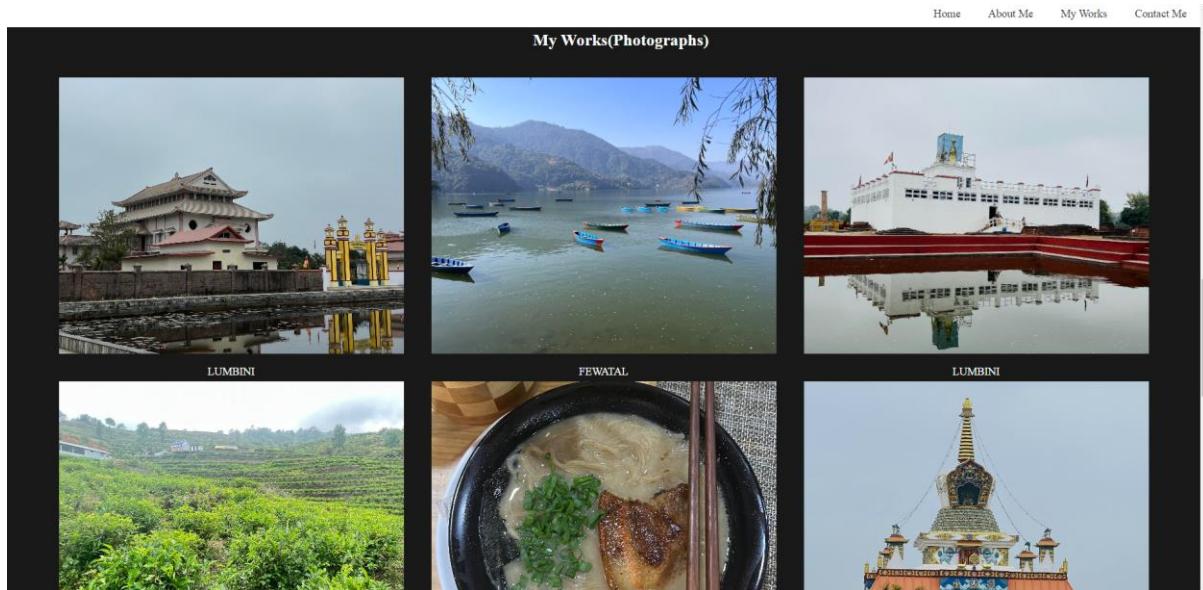

# Design

## Home

## About Me

## My Works

## Contacts

## Limitation and Conclusion

Although I'm very much satisfied with my portfolio website, there are still other things which I could not add. They are:

- I haven't used JAVA on this as I'm still learning it

- I couldn't put the respective logo of facebook, instagram and discord so instead I used words for it using hover.
- I haven't used php on this through which I could have gotten the actual message send by viewers to me through the message box because I've yet to learn this language

# THANKYOU
